

Note:-

1. Maintain Temperature about 30°C and Humidity for about 70% when the eggs are kept for hatching in tray.
2. Feed while hatching in trays should be given in 3 stages, eg:
For 400gm cow feed; first give 1st day 100gm , 3rd day 100gm & 5th day 200gm.
3. After 5DOL larva put in kitchen waste till they become 15 DOL. And after that they can be used as feed for hen and fish and also for making flies.
4. For making flies, when larva go to pre-pupa stage put them in cage.
5. Temperature(25°C-30°C) and humidity (65%-70%) of cage should also be maintained.
6. Wooden strips trap should placed in cage for collecting eggs. And below that rotten fruits or fish waste should be kept for the smell which is required them for laying eggs.
7. Spray water to the cage, so flies can take water.
8. While removing the eggs from the trap use sharp cutter to collect the eggs from wooden strips.
